

CLAIMS

The pending claims are listed as follows:

1. (Currently Amended) An automated method for generating a quote for a piece of leased equipment, the method comprising:
 - (a) electronically soliciting from a client terms for a lease for the piece of leased equipment, including a cost and residual value for the piece of leased equipment, term for the lease, and down payment information;
 - (b) electronically receiving and storing in a server the terms for the lease;
 - (c) computing payment terms for the lease based on the terms of the lease and a desired rate of return for the lease;
 - (d) generating a report at the client showing the payment terms for the lease; and
 - (e) altering the ~~quote~~ terms depending on results of a credit check.
2. (Original) The method of claim 1 further comprising the act of generating documentation for the piece of leased equipment such that a user may complete the documentation.
3. (Original) The method of claim 1 wherein terms for the lease include a capital cost, a residual, a dealer fee, a documentation fee, upfront fees, length of lease in months, and type of asset.
4. (Original) The method of claim 3 wherein the act of computing payment terms comprises:
 - (a) setting parameters including a borrowing interest rate, a lending interest rate, and a payment schedule; and
 - (b) calculating a net present value calculation, a revenue calculation, an expense calculation, and a contributed value calculation.
5. (Original) The method of claim 1 wherein the act of electronically receiving the terms for the lease from the client further comprises electronically receiving the information over the Internet.

6. (Original) The method of claim 1 wherein the act of electronically receiving the terms for the lease further comprises receiving the information through an interactive telephone response system.

7. (Previously presented) An automated method for leasing a vehicle comprising:

- (a) electronically soliciting from a client terms for a vehicle lease, including a cost and residual value for the vehicle, term for the lease, and down payment information;
- (b) receiving and storing in the server the terms for the lease;
- (c) computing payment terms at a server for the lease based on the terms of the lease and a desired rate of return for the lease;
- (d) generating a report at the client showing the payment terms for the lease;
- (e) receiving at the server instructions from a client to go forward with the vehicle lease;
- (f) electronically soliciting from the lessee at the client basic identification information, including identification information for an individual user of the leased vehicle;
- (g) receiving and storing in the server the client basic identification information;
- (h) scoring the lessee's credit using external credit checking databases;
- (i) providing a credit report to the client detailing a credit score for the lessee;
- (j) altering the terms for the vehicle lease depending on results of the credit report; and
- (h) generating documentation for the vehicle lease such that the user at the client may complete the documentation.

8. (Original) The method of claim 7 wherein the act of electronically receiving the terms for the lease from the client further comprises electronically receiving the information over the Internet.

9. (Original) The method of claim 7 wherein the act of electronically receiving the terms for the lease further comprises receiving the information through an interactive telephone response system.

10. (Currently Amended) An automated system for generating a quote for a piece of leased equipment, the system comprising:

(a) a user interface, ~~capable of allowing a user to~~ for interactively ~~input~~ inputting lease related information by a user and ~~after~~ altering the lease related information depending on results of an automated credit check;

(b) a server adapted to electronically receive ~~terms of a lease~~ the lease related information from the user interface, store and process the ~~terms~~ lease related information, ~~process the terms~~, and generate reports indicating the ~~quote~~ lease related information; and

(c) a communication path electronically linking the user interface to the server.

11. (Original) The system of claim 10 wherein the server is adapted to generate documentation such that a user can complete the documentation.

12. (Original) The system of claim 10 further comprising an external server for communication between the user interface and the server.

13. (Original) The system of claim 10 wherein the terms of the lease include a cost and residual value for the piece of leased equipment, a term for the lease, and down payment information.

14-19. Canceled

20. (Previously presented) An automated system for leasing a vehicle, the system comprising:

(a) a user interface;

(b) a server having memory and a processor, wherein the processor contains at least one program to perform the following acts:

(i) electronically soliciting at the user interface terms for a vehicle lease;

- (ii) computing payment terms at a server for the lease based on the terms of the lease and a desired rate of return for the lease;
 - (iii) generating a report at the user interface showing the payment terms for the lease;
 - (iv) receiving instructions from the user interface to go forward with the vehicle lease;
 - (v) electronically soliciting from a lessee at the user interface identification information, including identification information for an individual user of the leased vehicle;
 - (vi) receiving and storing in the server the identification information;
 - (vii) scoring the lessee's credit using external credit checking databases;
 - (viii) providing a credit report detailing a credit score for the lessee;
 - (ix) altering the terms for the vehicle lease depending on results of the credit report; and
 - (x) generating documentation for the vehicle lease such that the user at the user interface may complete the documentation; and
- (c) a communication path electronically linking the user interface to the server.

21. (Original) The system of claim 20, further comprising an external server for communication between the user interface and the server.

22. (Original) The system of claim 20, further comprising a second communication path electronically linking the server to an external data source.
